Preface

This is the fifth cumulative index to SURGERY, GYNECOLOGY & OBSTETRICS, covering Volumes 111 to 120—July 1960 through June of 1965. All original articles, editorials, and special sections, such as The Book Shelf, The Surgeon at Work, and Collective Reviews, which appeared during this five year period have been indexed and cross-indexed so as to make this vast volume of material easily and readily accessible to the user. The Collective Reviews prior to January 1964 appeared in the International Abstracts of Surgery and are indicated by I.A.S. in the paginations.

The fifth index consists of Part I, The Subject Index, and Part II, The Author Index. The subjects have been indexed according to organs, regions, anatomical structures, and drugs and other chemicals. Numerous cross references are supplied to guide the user, as in searching for specific structures, tests, techniques, drugs. The Author Index lists the complete bibliographical information under the name of the author whose name appears first in the published article, with cross references to the co-authors.
